

ABSTRACT OF THE DISCLOSURE

A system and method for providing signals to television receivers (60) of selected users within a television network (30) is disclosed. The system comprises an  
5 intercept unit (130) connected to a telephone network (110). The intercept unit (130) is arranged to obtain data on a telephone call being made to a user's telephone number and to communicate the data to the receiver (60) of the user. The receiver (60) is arranged to display the  
10 data on an associated television screen (70).
